

Gentlemen, I have been told that the FCC has before it a petition by Bell South asking the FCC to stop regulating broadband service.

The small ISP's could be severely damaged or even be put out of business if you should grant Bell South their petition. This would be unfair to the small ISP and unfair to persons like myself who like the freedom of choice afforded us as the situation now exists.

I very much like to do business with the smaller companies as I have found by experience that the service is far superior to the large companies. I hope you will consider by feelings and deny this petition to Bell South or any other big petitioners.

Thank you.

Thomas Connell
